Qocket No: WELLISCH Appl. No: 09/720,520

CLEAN VERSION OF AMENDED CLAIMS:

1. (3X Amended) Electric motor including a stator and a rotor which defines a

rotor axis and includes at least a stack of laminations layered by sheets and

provided with slots for receiving rotor windings, wherein at an end face of

the at least one stack of laminations, there is provided at least one rotor end

sheet which abuts laterally in radial direction the stack of laminations and is

made of high-strength fine-grain structural steel, wherein the rotor end sheet

matches, at least in proximity of the rotor axis, a shape of the sheets layered

in the stack of laminations.

6. (Twice Amended) An electric motor, comprising:

- a stator; and

- a rotor defined by a rotor axis and having a stack of laminations which is

layered by sheets, said stack of laminations having opposite end faces,

and two rotor end sheets, one of the rotor end sheets provided on one of

the end faces of the stack of laminations, and the other one of the rotor

end sheets provided on the other one of the end faces of the stack of

laminations, each of said rotor end sheets abutting laterally in radial

direction the stack of laminations and being made of high-strength fine-

grain structural steel, wherein each of the rotor end sheets matches, at

least in proximity of the rotor axis, a shape of the sheets layered in the

stack of laminations.
